

Sustainability Governance of China's Global Infrastructure Investments

SGAIN is a research project supported by Dr Yixian Sun's £1.7 million UKRI Future Leaders Fellowship. Our study programme use novel methods to assess China's efforts to promote green development through infrastructure investments and sustainability impacts of key Chinese projects in different host contexts across the Global South.

Research Focuses

Mapping policies & governance initiatives

to green China's overseas engagement

Assessing on-the-ground impacts

of key Chinese projects in varying contexts

Identifying future measures

to align international investments with local sustainability needs

Interdisciplinary & mixed-method analysis using primary data collected in Indonesia, Pakistan, Bangladesh and China

A global knowledge network on sustainability governance including a fellowship scheme

Impact on sustainability policy and action in the Global South through engagement with policymakers and stakeholders
